Subject: Jewels and Stones

The Daily Byte

Good morning,

Need help with yesterday's problem? Start getting solutions.

Today's Byte

This question is asked by Amazon. Given a string representing your stones and another string representing a list of jewels, return the number of stones that you have that are also jewels.

Ex: Given the following jewels and stones...

```
jewels = "abc", stones = "ac", return 2  
jewels = "Af", stones = "AaaddfFf", return 3  
jewels = "AYOPD", stones = "ayopd", return 0
```

Thanks,
The Daily Byte
