Good morning,

Need help with yesterday's problem? Start getting solutions.

### Today's Byte

This question is asked by Google. Given an array of integers, return whether or not two numbers sum to a given target,  $k$ .

Note: you may not sum a number with itself.

Ex: Given the following...

```
[1, 3, 8, 2], k = 10, return true (8 + 2)
[3, 9, 13, 7], k = 8, return false
[4, 2, 6, 5, 2], k = 4, return true (2 + 2)
```

Thanks,  
The Daily Byte
