The Daily Byte

Good morning,

Need help with yesterday's problem? [Start getting solutions.](#)

Today's Byte

Given an integer

N , return the total number self divisible numbers that are strictly less than

N (starting from one).

Note: A self divisible number is a number that is divisible by all of its digits.

Ex: Given the following value of

N ...

$N = 17$, return 12 because 1, 2, 3, 4, 5, 6, 7, 8, 9, 11, 12, 15 are all self divisible numbers.

Thanks,

The Daily Byte
