The Daily Byte

Good morning,

Need help with yesterday's problem? Start getting solutions.

Today's Byte

This question is asked by Facebook. Given a string `s` containing only lowercase letters, continuously remove adjacent characters that are the same and return the result.

Ex: Given the following strings...

```
s = "abccba", return ""  
s = "foobar", return "fbar"  
s = "abccbefggfe", return "a"
```

Thanks,
The Daily Byte
