Subject: New Value

The Daily Byte

Good morning,

Need help with yesterday's problem? [Start getting solutions.](#)

Today's Byte

Given the reference to a binary search tree and a value to insert, return a reference to the root of the tree after the value has been inserted in a position that adheres to the invariants of a binary search tree.

Note: It is guaranteed that each value in the tree, including the value to be inserted, is unique.

Ex: Given the following tree and value...

```
      2
     / \
    1   3
value = 4, return the following tree...
      2
     / \
    1   3
         \
         4
```

Thanks,
The Daily Byte
