Subject: Valid Anagram

The Daily Byte

Good morning,

Need help with yesterday's problem? Start getting solutions.

Today's Byte

This question is asked by Facebook. Given two strings

`s` and

`t` return whether or not

`s` is an anagram of

`t`.

Note: An anagram is a word formed by reordering the letters of another word.

Ex: Given the following strings...

```
s = "cat", t = "tac", return true  
s = "listen", t = "silent", return true  
s = "program", t = "function", return false
```

Thanks,
The Daily Byte
