Subject: Longest Phrase

The Daily Byte

Good morning,

Need help with yesterday's problem? [Start getting solutions.](#)

Today's Byte

Given an array of words, return the length of the longest phrase, containing only unique characters, that you can form by combining the given words together.

Ex: Given the following words...

```
words = ["the","dog","ran"], return 9 because you can combine  
all the words, i.e. "the dog ran" since all the characters in  
the phrase are unique.
```

Ex: Given the following words...

```
words = ["the","eagle","flew"], return 4 because "flew" is the  
longest phrase you can create without using duplicate  
characters.
```

Thanks,
The Daily Byte
