The Daily Byte

Good morning,

Need help with yesterday's problem? Start getting solutions.

Today's Byte

This question is asked by Google. Given a string of digits, return all possible text messages those digits could send. Note: The mapping of digits to letters is as follows...

```
0 -> null
1 -> null
2 -> "abc"
3 -> "def"
4 -> "ghi"
5 -> "jkl"
6 -> "mno"
7 -> "pqrs"
8 -> "tuv"
9 -> "wxyz"
```

```
Ex: digits = "23" return ["ad", "ae", "af", "bd", "be", "bf",
"cd", "ce", "cf"]
```

Thanks,
The Daily Byte

Need help negotiating your offer? Chat with former tech recruiters who'll guide you on exactly what to say to get you paid more. Get negotiation help from [levels.fyi](#).
