## The Daily Byte

Good morning,

Need help with yesterday's problem? [Start getting solutions.](#)

### Today's Byte

This question is asked by Facebook. Given a string, check if it can be modified such that no two adjacent characters are the same. If it is possible, return any string that satisfies this condition and if it is not possible return an empty string.

Ex: Given the following string

s ...

```
s = "abb", return "bab".
```

Ex: Given the following string

s ...

```
s = "xxxy", return "" since it is not possible to modify s  
such that no two adjacent characters are the same.
```

Thanks,  
The Daily Byte
