**Subject:** Unique Combinations

## The Daily Byte

Good morning,

Need help with yesterday's problem? [Start getting solutions.](#)

### Today's Byte

This question is asked by Apple. Given a list of positive numbers without duplicates and a target number, find all unique combinations of the numbers that sum to the target. Note: You may use the same number more than once.

Ex: Given the following numbers and target...

```
numbers = [2,4,6,3], target = 6,  
return [  
    [2,2,2],  
    [2,4],  
    [3,3],  
    [6]  
]
```

Thanks,  
The Daily Byte
