Subject: Valid Palindrome with Removal

The Daily Byte

Good morning,

Need help with yesterday's problem? Start getting solutions.

Today's Byte

This question is asked by Facebook. Given a string and the ability to delete at most one character, return whether or not it can form a palindrome.

Note: a palindrome is a sequence of characters that reads the same forwards and backwards.

Ex: Given the following strings...

```
"abcba", return true  
"foobof", return true (remove the first 'o', the second 'o',  
or 'b')  
"abccab", return false
```

Thanks,
The Daily Byte
