The Daily Byte

Good morning,

Need help with yesterday's problem? Start getting solutions.

> Today's Byte

Given an integer array,
`nums` , return the total number of "partners" in the array.
Note: Two numbers in our array are partners if they reside at different
indices and both contain the same value.

Ex: Given the following array
`nums ...`

```
nums = [5, 5, 3, 1, 1, 3, 3], return 5.
5 (index 0) and 5 (index 1) are partners.
1 (index 3) and 1 (index 4) are partners.
3 (index 2) and 3 (index 5) are partners.
3 (index 2) and 3 (index 6) are partners.
3 (index 5) and 3 (index 6) are partners.
```

Thanks,

The Daily Byte
