Subject: Find Middle Element

The Daily Byte

Good morning,

Need help with yesterday's problem? Start getting solutions.

> Today's Byte

This question is asked by Amazon. Given a non-empty linked list, return the middle node of the list. If the linked list contains an even number of elements, return the node closer to the end.
Ex: Given the following linked lists...

```
1->2->3->null, return 2
1->2->3->4->null, return 3
1->null, return 1
```

Thanks,
The Daily Byte
