The Daily Byte

Good morning,

Need help with yesterday's problem? Start getting solutions.

> Today's Byte

Given the reference to the root of a binary search tree and a
`target` value, return whether or not two individual values within the
tree can sum to the target.

Ex: Given the following tree and
`target ...`

```
    1
   / \
  2   3, target = 4, return true.
```

Ex: Given the following tree and
`target ...`

```
    1
   / \
```

```
2    3, target = 7, return false.
```

Thanks,
The Daily Byte
