Subject: Valid Palindrome

The Daily Byte

Good morning,

Need help with yesterday's problem? Start getting solutions.

> Today's Byte

This question is asked by Facebook. Given a string, return whether or not it forms a palindrome ignoring case and non-alphabetical characters.
Note: a palindrome is a sequence of characters that reads the same forwards and backwards.

Ex: Given the following strings...

```
"level", return true
"algorithm", return false
"A man, a plan, a canal: Panama.", return true
```

Thanks,
The Daily Byte
