The Daily Byte

Good morning,

Need help with yesterday's problem? Start getting solutions.

> Today's Byte

Given an integer array that is sorted in ascending order and a value
`target` , return two unique indices (one based) such that the values at
those indices sums to the given target.
Note: If no two such indices exist, return
`null` .

Ex: Given the following
`nums` and
`target` ...

```
 nums = [1, 2, 5, 7, 9], target = 10, return [1,5].
```

Ex: Given the following
`nums` and
`target` ...

```
nums = [1, 3, 8], target = 13, return null.
```

Thanks,
The Daily Byte
