The Daily Byte

Good morning,

Need help with yesterday's problem? Start getting solutions.

> Today's Byte

Given an array of integers,
`nums`, each element in the array either appears once or twice. Return a
list containing all the numbers that appear twice.
Note: Each element in
`nums` is between one and
`nums.length` (inclusive).

Ex: Given the following array
nums ...

```
 nums = [2, 3, 1, 5, 5], return [5].
```

Ex: Given the following array
nums ...

```
 nums = [1, 2, 3], return [].
```

Ex: Given the following array

```
nums ...
```

```
 nums = [7, 2, 2, 3, 3, 4, 4], return [2,3,4].
```

Thanks,
The Daily Byte
