The Daily Byte

Good morning,

Need help with yesterday's problem? Start getting solutions.

> Today's Byte

You are transporting bricks on a construction site and want to work as efficiently as possible. The weight of each brick is given by `bricks[i]`. Given a wheelbarrow that can carry up to (not including) 5000 pounds, return then maximum number of bricks you can place in your wheelbarrow to transport.

Ex: Given the following bricks…

```
bricks = [1000, 1000, 1000, 2000], return 3.
```

Ex: Given the following bricks…

```
bricks = [1000, 200, 150, 200], return 4.
```

Thanks,
The Daily Byte
